

Contents

1	Introduction to Python	1
1.1	Introduction	1
1.2	Overview of Python	2
1.3	Getting Started	4
1.4	Integers, Floats and Strings	5
1.5	Lists and Tuples	9
1.6	Dictionaries	11
1.7	Examples of Python code in the simulator - Lists and Matrices	13
1.8	Examples of Python code in the simulator - Strings	18
1.9	Examples of Python code in the simulator - Dictionaries	22
1.10	Conclusions	24
2	User Interface	27
2.1	Introduction	27
2.2	Circuit representation	28
2.3	Processing of components	31
2.4	Data Structures of components	35
2.4.1	Resistor	37
2.4.2	Inductor	37
2.4.3	VoltageSource	38
2.4.4	Capacitor	40
2.4.5	Ammeter	40
2.4.6	Voltmeter	42

2.4.7	VariableResistor	42
2.4.8	VariableInductor	44
2.4.9	ControlledVoltageSource	44
2.4.10	Diode	45
2.4.11	Switch	46
2.5	Logical flow of the simulation	47
2.5.1	Launch simulator	48
2.5.2	Simulation parameters	49
2.5.3	Create component objects	50
2.5.4	Circuit parameters file	51
2.5.5	Update component parameters	51
2.6	Iterative procedure during the simulation	52
2.6.1	Simulation time instant	52
2.6.2	Update branch data	53
2.6.3	Generate input voltage	54
2.6.4	Run control code	54
2.6.5	Perform circuit analysis	54
2.6.6	Update component objects	55
2.6.7	Write output data	55
2.7	Conclusions	56
3	Interface for User Control Functions	58
3.1	Introduction	58
3.2	Inclusion of control in the simulator	59
3.3	Special variables in control code	65
3.4	Time scheduling control code	70
3.5	Interfacing control code	78
3.6	Conclusions	82
4	Case Study - Shunt VAR compensator	85
4.1	Introduction	85
4.2	Description of the circuit	87

4.3	Parameters of the simulation and the circuit	89
4.4	First stage in control development - grid synchronization	97
4.5	Second stage in control development - current reference generation and closed loop current control	107
4.6	Final stage of control development - the entire circuit with the VSC	124
4.7	Conclusions	142
5	Nodes, Branches and Loops	144
5.1	Introduction	144
5.2	Jump labels	144
5.3	Nodes and branches	148
5.4	Short branches and nodes	152
5.5	Connectivity map for Nodal Analysis	155
5.6	Loops	159
5.7	Loop Map	169
6	Circuit analysis - Loop analysis	173
6.1	Introduction	173
6.2	Matrices for loop analysis	173
6.3	Solving the matrix equation	179
6.4	Mapping branch currents and loop currents	183
6.5	Effects of time constants on loop analysis	187
6.6	Effect of stiff loops	190
6.7	Loop manipulations	193
6.8	Limitation of loop analysis	199
7	Circuit analysis - Nodal analysis	201
7.1	Introduction	201
7.2	Concept of nodal analysis	201
7.3	Limitation of loop analysis in non-linear circuits	206
7.4	Applying nodal analysis in non-linear circuits	209
7.5	Continuing with loop analysis	213
7.6	Event driven circuit updates	216

7.7 Process flow in the simulator	219
